

360ENGAGE: The Club-Owned Supporter Operating System

1. The Missing Middle

Imagine a supporter relationship from the club's point of view today.

The club knows the fan bought a ticket. They know the fan opened an email. They might even know the fan once bought a shirt in the off-season.

But they have no idea what happened next.

Did that fan abandon a 15-minute queue for a halftime beer? Did they want to bring their daughter to her first match, but couldn't find family accessibility details? Did they try to find an away kit, get frustrated, and leave empty-handed? Have they been trying to report a persistent safety issue in section 104 but can't get through the phone lines?

Clubs are effectively commercially blind to up to 70% of their supporter base. They own the audience, but they lose the intent. That missing middle—the gap between a static ticket sale and the fan's actual demands—is where millions of dollars in commercial value leak out every season.

360Engage is the operational layer built to capture it.

2. Company Purpose

360Engage gives sports clubs a fully branded, club-owned intelligence and commerce platform that turns previously invisible fan interactions into measurable revenue, better service outcomes, and a compounding first-party data asset.

3. The Problem: Audiences Without Operations

Today, clubs have more supporter demand than they can operationally see or manage.

The gap between fan expectations and club capability is glaring. Fans expect immediate, personalized digital assistance and low-friction commerce. Clubs, on the other hand, are

routinely forced to choose between underused, expensive-to-maintain custom apps, generic web chatbots that don't drive transactions, or disconnected ticketing and CRM silos.

When clubs lack a centralized interaction layer:

- **Conversion drops:** In-stadium purchases lag because ordering is high-friction.
- **Service fragments:** Fan inquiries pre-match (travel, hospitality, access) get lost in generic inboxes or endless phone queues.
- **Sponsors lose out:** Partner activations are untargeted and lack clean ROI data.
- **Data remains thin:** Clubs rely on rented audiences via social media rather than owning their fan graph.

Clubs increasingly realize they don't just need to sell more tickets—they desperately need to increase the revenue generated per supporter.

4. The Solution: Two Surfaces, One Platform

360Engage solves this not by building "just another app," but by inserting a club-owned operating layer directly into the moments that matter. The platform reaches the fan through two distinct, connected surfaces.

Surface A: The Game-Day Companion (In-Stadium)

This is an ultra-fast, browser-first experience triggered by a QR code at the supporter's seat or in the concourse. No app download required. A fan scans the code and instantly drops into a club-branded journey capable of:

- Pre-ordering food and beverage for halftime pickup to skip queues.
- Browsing and purchasing merchandise.
- Exploring seat upgrades and future ticketing offers.
- Reporting safety concerns or service issues directly to stadium ops.
- Receiving contextual, real-time sponsor promotions (e.g., "Burgers are half-price in the lounge post-match").

Surface B: Concierge AI (Pre-Match / Off-Match)

This is the higher-touch relationship layer. Embedded in the club's website or existing app, and driven by advanced conversational AI (including voice), this interface acts as a 24/7 club ambassador. It handles richer workflows:

- Logistics, travel advice, and tailored hospitality planning.

- Assisting families with first-match orientations.
- Merchandise pre-ordering ahead of game day.
- General club inquiries, gossip about signings, and issue resolution.
- Recalling past interactions to build deep fan rapport ("Hey Will, last time you came over for the Arsenal game...").

The Strategic Difference: These are not separate businesses. They are two entry points feeding into the same unified, club-owned intelligence engine.

5. Why This Matters Commercially

360Engage creates immediate monetary value without relying on a single, narrow revenue line. The financial upside for clubs is diverse:

- **F&B and Merch:** Capturing abandoned sales by removing line friction.
- **Ticketing:** Seamless post-game upselling while sentiment is high.
- **Sponsorship:** Creating highly targeted, measurable activation channels to sell to partners.
- **Service Efficiency:** Deflecting basic incoming calls and emails, saving operational headcount.

This is a direct path to maximizing the yield of the existing fan base.

6. Why Now

The timing for this platform is uniquely favorable. Several distinct forces have converged:

- **Enabling Technology:** Conversational AI is now fast and intelligent enough to handle complex logic. Browser-first experiences and mobile payment infrastructures are robust enough to bypass app stores altogether.
- **Economic Impetus:** Sports organizations are under acute pressure to monetize existing attendance and prove clear ROI for their sponsors.
- **Cultural Acceptance:** The pandemic normalized QR code interaction. Consumers now default to digital ordering and expect their live entertainment to match the seamlessness of their e-commerce experiences.

7. How The Product Deepens Over Time

The strongest aspect of 360Engage is its technical progression. We deliberately avoid selling a massive, unproven technical monolith. Instead, the product acts as a commercial wedge that rapidly deepens into defensible infrastructure.

Stage 1: High-Value Journeys (The Wedge) The initial wedge is pure utility. We deploy low-friction game-day ordering (F&B/Merch) and basic concierge support. The system immediately proves ROI and captures fan interest.

Stage 2: The Club Workflow Layer Once the journeys drive volume, the platform integrates deeper with club POS and ticketing. It offers reusable workflow logic, robust reporting dashboards, and sophisticated admin tools. It transitions from a fan tool into a critical piece of club software.

Stage 3: The Supporter Intelligence Data Asset As interaction volume scales across multiple clubs, the platform becomes a massive first-party intelligence layer. It maps supporter behavior, builds complex fan memory profiles, and optimizes campaigns.

Stage 4: Platform Defensibility Long-term, the company's moat is not just a UI. It is the complex integrations, the club-owned workflows, and the unprecedented aggregate fan data. We evolve into the definitive OS for sports venue interaction—eventually capable of powering our own sports-specific analytical LLMs.

8. Business Model

Our primary revenue engine aligns with our position as essential club infrastructure:

- **B2B SaaS / Platform Subscription:** Clubs pay an annual or multi-year licensing fee to access the platform, dashboards, and ongoing intelligence engine.

Flexible Commercial Structures: Where strategically beneficial to close anchor clients, we maintain the agility to structure deals with performance-linked upside (e.g., fractional revenue shares on generated transaction volume) or module-based pricing.

9. Go-To-Market Strategy

We do not need to blanket the market on day one. Our path to scale is methodical and repeatable:

1. **Pilot Credibility:** Deploy with a focused group of forward-thinking clubs (e.g., Sutton FC). Prove fan adoption, concrete revenue lift, and low operational burden for club staff.

2. **Reference Playbooks:** Convert early wins into robust case studies and repeatable implementation templates for specific tiers of clubs.
3. **Ecosystem Expansion:** Sell the proven platform outward through direct club relationships, league-level partnerships, and introductions driven by sponsors and commercial agencies.

10. Risks and Mitigations

- **Club Integration Complexity:** Legacy systems are notoriously fragmented. *Mitigation:* We design the Phase 1 wedge to operate alongside existing systems with minimal deep integration required, adding API depth only as value is proven in later phases.
- **AI Reliability/Liability:** Generative AI can invent facts, posing risks for safety and accessibility info. *Mitigation:* Critical, high-liability data (stadium navigation, accessibility, safety) is strictly hard-coded and club-verified. AI is restricted to conversational routing, engagement, and upselling.
- **The Bespoke Trap:** Customizing uniquely for every club destroys margins. *Mitigation:* The core routing, checkout, and AI architecture are built as standard modules. Clubs customize the *data* and *branding*, not the codebase.

11. Financing Logic

We are raising capital to execute a disciplined, multi-phase technical and commercial roadmap. We are not raising against a vague concept—we are unlocking specific valuations at each phase:

- **Phase 1 Capital:** Builds the commercial wedge and secures live pilot deployments. Generates the reference data demonstrating real revenue lift and frictionless fan adoption.
- **Phase 2 Capital:** Hardens the underlying architecture, expands integrations (POS, CRM), and creates the multi-tenant SaaS infrastructure required to rapidly onboard the next wave of clubs.
- **Phase 3 Capital:** Funds multi-club platform expansion, advanced data analytics modules, and sponsor-activation networks, cementing the platform's defensibility.

12. Strategic Vision

If 360Engage succeeds, we will no longer just be a software vendor to sports teams. We will be the central nervous system for how sports organizations understand and monetize their crowds. We will own the layer where service happens, where intent is captured, where

commerce triggers, and where fan memory compounds—creating the required digital infrastructure for the modern sports venue.
